

# **GenniPod**

***designed by JMH Innovations***

Introductory Price - Oshkosh Special -  
thru August 31, 2008 ..... \$249.95  
Price September 1, 2008 ..... \$299.95

The GenniPod wind generator will keep your battery charged when using a 12VDC ignition system (009 distributor and coil) with a hand held radio and GPS going - without battery loss. The GenniPod is designed for use on Experimental and Ultralight Aircraft.

The GenniPod has been tested up to 110 mph, but at 70 mph - it delivers 4 amps at 13.5 volts.

Mounting of the GenniPod is very simple - the flange that circles the body just behind the impeller has more than adequate strength for a bolt on mount.

Hook up couldn't be simpler! Just two wires - positive and negative. You add a generator switch, a 5 amp breaker, wiring and a small battery.

Regulator:

Max input 55VDC @ 8 amps • Max output 13.5 volts @ 8 amps

The GenniPod weighs just 3 lbs. 3.5 ounces!
